The laboratory grown diamond described in this Report ("Report") has been graded, tested, analyzed, examined and/or inscribed by International Gemological Institute (IGI). A laboratory grown diamond is one that has essentially the same chemical, physical and optical properties as a natural diamond. IGI is a company owned and operated by a natural person (a manufactured product). IGI employs and utilizes those techniques and equipment currently available to IGI, including, without limitation, X-ray magnification, corrected triple beam, binocular microscope, master color comparison, spectroscopy, non-contact optical measuring devices and Scanning Tunneling and Atomic Force Microscopy and other instruments and/or processes as deemed appropriate by IGI. This Report includes advanced security features. A duly accredited gemologist or jeweler can advise you with respect to the importance of interrelationship between cut, color, clarity and carat weight.
